

# USING RESPONSIVE IMAGES (NOW)

By [Chen Hui Jing](#) / [@hj\\_chen](#)

# SO YOU WANT TO BUILD A RESPONSIVE WEBSITE?

# THE OBESITY PROBLEM

Source: [http archive](http://archive)

>60% from images

# LOSE-LOSE SITUATION

Blurry image on HD 5K display?

5mb pixel-dense image on 3.8inch Nokia phone?

# POTENTIAL SOLUTIONS

WURFL.js	Requires additional development effort for it to place nice in your project
Adaptive image	Server-side solution; Dependent on PHP; May need to mess around with server configuration
Using cookies	Mostly experimental; Not advisable for production sites
Hack <img>	Not scalable for image heavy sites; Fails validation; Not semantic

# <SRCSET> AND <PICTURE>

Responsive image solution native to the browser.

Refer to [latest specification](#) for all the details.

# SOME BACKGROUND

My name is Chen Hui Jing.

Self taught designer and developer.

Work at Nurun Singapore.

Write blog posts from time to time.

# THE **<SRCSET>** ATTRIBUTE

Declare comma-separated list of image sources, which browsers will serve according to certain conditions we specify using descriptors.

# DESCRIPTORS

x descriptors indicate the pixel-density of an image

w descriptors indicate the width of an image

# THE <SIZES> ATTRIBUTE

Specify the intended display size of the image

Must be present if w descriptors are used

Syntax: <media-condition> <CSS length>

You can't use percentages for the second condition.  
The only relative CSS lengths you can use are viewport units.

```
sizes="(max-width: 400px) 100vw,  
(max-width: 960px) 75vw,  
640px"
```

# FIXED WIDTH IMAGES

```

```

# FLUID WIDTH IMAGES

```

```

# THE <PICTURE> ELEMENT

A wrapper for the image and its sources.

Will not work without an <img> element.

```
<picture>
  <source media="(min-width: 40rem)"
    srcset="full-large.jpg 1024w,
            full-medium.jpg 640w,
            full-small.jpg 320w"
    sizes="33.3vw" />
  <source srcset="cropped-large.jpg 2x,
                cropped-small.jpg 1x" />
  
</picture>
```

# THE <SOURCE> ELEMENT

Allows us to declare multiple sets of image sources.

Syntax: <media attribute>|<type attribute> <srcset attribute>

```
<source media="(min-width: 1280px)" srcset="wide-large.jpg 1280w, wide-medium.jpg 640w, wide-small.jpg 320w">  
<source media="(min-width: 960px)" srcset="cropped-large.jpg 960w, cropped-medium.jpg 480w, cropped-small.jpg 240w">  
<source srcset="narrow-large.jpg 2x, narrow-small.jpg 1x">
```

# ART DIRECTION USE-CASE

```
<picture>  
  <source media="(min-width: 960px)" srcset="ticker-tape-large.jpg">  
  <source media="(min-width: 575px)" srcset="ticker-tape-medium.jpg">  
    
</picture>
```

# IMAGE FORMAT USE-CASE

Order of source matters.

Falls back to original <img> element.

```
<picture>  
  <source type="image/vnd.ms-photo" src="wwc2015.jxr">  
  <source type="image/jp2" src="wwc2015.jp2">  
  <source type="image/webp" src="wwc2015.webp">  
    
</picture>
```

# CAN I USE...SRCSET?

Srcset attribute

- LS

Global

56.46% + 7.72% = 64.17%

Allows authors to define various image resources and "hints" that assist a user agent to determine the most appropriate image source to display (e.g. high-resolution displays, small monitors, etc).
